Short Environmental Assessment Form Part 3 Determination of Significance

For every question in Part 2 that was answered "moderate to large impact may occur", or if there is a need to explain why a particular element of the proposed action may or will not result in a significant adverse environmental impact, please complete Part 3. Part 3 should, in sufficient detail, identify the impact, including any measures or design elements that have been included by the project sponsor to avoid or reduce impacts. Part 3 should also explain how the lead agency determined that the impact may or will not be significant. Each potential impact should be assessed considering its setting, probability of occurring, duration, irreversibility, geographic scope and magnitude. Also consider the potential for short-term, long-term and cumulative impacts.

Part 1 of the EAF indicates the site contains or is near a 100 Year Flood Plan and Wetlands. The culvert that is the subject of this action runs over Sandy Creek, which is classified as a wetland. No other wetlands are indicated by the EAF Mapper or State and Federal Records.

The action is for the acquisition of easements, rehabilitation or reconstruction of existing culverts. Replacement, rehabilitation, and reconstruction of existing structures are generally Type II Actions that have no significant adverse impacts on the environment. The acquisition of interests is limited to easements, temporary and permanent, for bridge improvements and future maintenance. This action is generally a Type II action and all changes or disturbance will be temporary or subject to permitting authorities such as the NYS Department of Environmental Conservation. Any bridge improvement work will be subject to all permit regulations and limitations as applicable for this site. Acquisition of easements are limited to bridge improvements and maintenance and will not result in any significant adverse environmental impacts.
