

A Message from County Executive Maggie Brooks

As County Executive, I am proud to announce the groundbreaking for the Monroe County Pediatrics and Visitation Center. This project is the culmination of the efforts of many dedicated individuals who share my commitment to making healthy children and families a priority in our community. This 22,000 square foot facility is not only innovative, and the first

of its kind nationwide, but it will be a nurturing and safe environment where kids can laugh, play and learn.

This unique facility provides Monroe County with an opportunity to positively impact the lives of children and families. By coordinating health and mental health services, evidence based programs and supervised visitation, we will powerfully influence outcomes while more efficiently utilizing our limited resources and staff. Providing cost-effective programs with a proven track record of success is true win-win for our entire community.

Monroe County is nationally recognized for our outstanding work with kids. This facility will enhance our well established, premier medical home for foster care children. It will continue our proud tradition of investing in our children and it once again puts us on the map as a model community.

Please join me in supporting this critical addition to our community.

Sincerely,

Maggie Brooks
Monroe County Executive

Environment

Monroe County Pediatrics & Visitation Center

Monroe County believes that children need healthy, safe environments where they can laugh, learn, and grow. The Pediatrics and Visitation Center demonstrates our commitment to serving children and adolescents in foster care; a high-risk special needs population with high rates of developmental, behavioral and mental health problems attributable to childhood traumas.

Opening in fall of 2010, the Monroe County Pediatrics and Visitation Center is an \$8 million dollar project that will improve outcomes for children and families through a coordinated and comprehensive approach to their health and well being. Services will include:

- Primary Health Services
- Evidence-Based Assessments & Evaluations
- On-Site Mental & Developmental Health Services
- Parenting Education Programs
- Supervised Visitation

Our goal is to effectively translate individual interventions into a well coordinated, comprehensive model. This one-of-a-kind facility will co-locate our nationally recognized medical home with a much needed supervised visitation center. We are confident that the center will become a national model for providing care to foster children.
