Appendix A
State Environmental Quality Review
FULL ENVIRONMENTAL ASSESSMENT FORM

Purpose: The full EAF is designed to help applicants and agencies determine, in an orderly manner, whether a project or action may be significant. The question of whether an action may be significant is not always easy to answer. Frequently, there are aspects of a project that are subjective or unmeasurable. It is also understood that those who determine significance may have little or no formal knowledge of the environment or may not be technically expert in environmental analysis. In addition, many who have knowledge in one particular area may not be aware of the broader concerns affecting the question of significance.

The full EAF is intended to provide a method whereby applicants and agencies can be assured that the determination process has been orderly, comprehensive in nature, yet flexible enough to allow introduction of information to fit a project or action.

Full EAF Components: The full EAF is comprised of three parts:

- Part 1:** Provides objective data and information about a given project and its site. By identifying basic project data, it assists a reviewer in the analysis that takes place in Parts 2 and 3.
- Part 2:** Focuses on identifying the range of possible impacts that may occur from a project or action. It provides guidance as to whether an impact is likely to be considered small to moderate or whether it is a potentially-large impact. The form also identifies whether an impact can be mitigated or reduced.
- Part 3:** If any impact in Part 2 is identified as potentially-large, then Part 3 is used to evaluate whether or not the impact is actually important.

THIS AREA FOR LEAD AGENCY USE ONLY

DETERMINATION OF SIGNIFICANCE -- Type 1 and Unlisted Actions

Identify the Portions of EAF completed for this project: Part 1 Part 2 Part 3

Upon review of the information recorded on this EAF (Parts 1 and 2 and 3 if appropriate), and any other supporting information, and considering both the magnitude and importance of each impact, it is reasonably determined by the lead agency that:

- A. The project will not result in any large and important impact(s) and, therefore, is one which **will not** have a significant impact on the environment, therefore a **negative declaration will be prepared**.
- B. Although the project could have a significant effect on the environment, there will not be a significant effect for this Unlisted Action because the mitigation measures described in PART 3 have been required, therefore a **CONDITIONED negative declaration will be prepared.***
- C. The project may result in one or more large and important impacts that may have a significant impact on the environment, therefore a **positive declaration will be prepared**.

*A Conditioned Negative Declaration is only valid for Unlisted Actions

NOTICE: This document is designed to assist in determining whether the action proposed may have a significant effect on the environment. Please complete the entire form, Parts A through E. Answers to these questions will be considered as part of the application for approval and may be subject to further verification and public review. Provide any additional information you believe will be needed to complete Parts 2 and 3.

It is expected that completion of the full EAF will be dependent on information currently available and will not involve new studies, research or investigation. If information requiring such additional work is unavailable, so indicate and specify each instance.

Description of Action:

Monroe County proposes an expansion to the existing Mill Seat Landfill located in the Town of Riga, New York. Monroe County ("the County") is the owner and permittee of the Mill Seat Landfill. The Mill Seat Landfill's SWMF Permit I.D. number is 8-2648-00014 with an approved disposal capacity of 1,945 tons per day. The Mill Seat Landfill is operated by Waste Management of New York, LLC (WMNY), under a lease agreement with the County. The location of the facility is shown on Figure 1.

The Proposed Mill Seat Landfill Expansion will:

- provide long-term, cost effective solid waste disposal capacity for the County; and
- secure additional disposal capacity in the County beyond the current useful life of the Mill Seat Landfill that ensure that locally controlled, environmentally sound, and reliable disposal capacity (ex. County biosolids disposal, City of Rochester municipal solid waste, etc.) will be provided without interruption for at least twenty-five (25) years to the residents and businesses located in the County.

The current permitted Mill Seat Landfill and associated operations occupy four hundred and thirty five (435) acres owned by the County which includes a double composite liner ("Landfill Footprint") on which solid waste is disposed and ancillary facilities (roads, buildings, soil borrow areas, stormwater ponds, etc.). The current permitted Landfill Footprint occupies approximately ninety-eight point six (98.6) acres and is estimated to be exhausted in 2018.

A total of nine hundred seventy seven (977) acres of contiguous parcels are owned by the County and WMNY. The additional Landfill Footprint may be up to one hundred eighteen (118) acres. Additional acres will be required for soil and geosynthetic stockpile areas, construction staging areas, stormwater collection, storage infrastructure and buffer. Soil balance estimates are currently under development; however, it is anticipated that soil for landfill construction, operation and closure will be obtained from one (1) or more off-site locations.

PART 2 - PROJECT IMPACTS AND THEIR MAGNITUDE

Responsibility of Lead Agency

General Information (Read Carefully)

- ! In completing the form the reviewer should be guided by the question: Have my responses and determinations been **reasonable?** The reviewer is not expected to be an expert environmental analyst.
- ! The **Examples** provided are to assist the reviewer by showing types of impacts and wherever possible the threshold of magnitude that would trigger a response in column 2. The examples are generally applicable throughout the State and for most situations. But, for any specific project or site other examples and/or lower thresholds may be appropriate for a Potential Large Impact response, thus requiring evaluation in Part 3.
- ! The impacts of each project, on each site, in each locality, will vary. Therefore, the examples are illustrative and have been offered as guidance. They do not constitute an exhaustive list of impacts and thresholds to answer each question.
- ! The number of examples per question does not indicate the importance of each question.
- ! In identifying impacts, consider long term, short term and cumulative effects.

Instructions (Read carefully)

- a. Answer each of the 20 questions in PART 2. Answer **Yes** if there will be **any** impact.
- b. **Maybe** answers should be considered as **Yes** answers.
- c. If answering **Yes** to a question then check the appropriate box(column 1 or 2)to indicate the potential size of the impact. If impact threshold equals or exceeds any example provided, check column 2. If impact will occur but threshold is lower than example, check column 1.
- d. Identifying that an Impact will be potentially large (column 2) does not mean that it is also necessarily **significant**. Any large impact must be evaluated in PART 3 to determine significance. Identifying an impact in column 2 simply asks that it be looked at further.
- e. If reviewer has doubt about size of the impact then consider the impact as potentially large and proceed to PART 3.
- f. If a potentially large impact checked in column 2 can be mitigated by change(s) in the project to a small to moderate impact, also check the **Yes** box in column 3. A **No** response indicates that such a reduction is not possible. This must be explained in Part 3.

If Any Action in Part 2 is Identified as a Potential Large Impact or If you Cannot Determine the Magnitude of Impact, Proceed to Part 3

Part 3 - EVALUATION OF THE IMPORTANCE OF IMPACTS

Responsibility of Lead Agency

Part 3 must be prepared if one or more impact(s) is considered to be potentially large, even if the impact(s) may be mitigated.

Instructions (If you need more space, attach additional sheets)

Discuss the following for each impact identified in Column 2 of Part 2:

1. Briefly describe the impact.
2. Describe (if applicable) how the impact could be mitigated or reduced to a small to moderate impact by project change(s).
3. Based on the information available, decide if it is reasonable to conclude that this impact is **important**.

To answer the question of importance, consider:

- ! The probability of the impact occurring
- ! The duration of the impact
- ! Its irreversibility, including permanently lost resources of value
- ! Whether the impact can or will be controlled
- ! The regional consequence of the impact
- ! Its potential divergence from local needs and goals
- ! Whether known objections to the project relate to this impact.

Impact on Land - Construction will occur in multiple phases and will continue for over thirty (30) years. The Proposed Action will alter the land through excavation and grading over the life of the project. The potential impacts will be analyzed in the Draft Supplemental Environmental Impact Statement (DSEIS). Not enough information is currently available to determine the magnitude of these potential impacts.

Impact on Water - The Proposed Action would result in a large amount of excavation on the site and potentially change surface water flow direction and volume. Additionally, wetland RG-6 is proposed to be impacted by the Proposed Action. Further information needs to be gathered to determine the magnitude of these impacts.

Impact on Agricultural Land Resources - Approximately one hundred seventy five (175) acres of land would be removed from agricultural production as a result of the Proposed Action. The significance of this loss of agricultural land will be addressed in the DSEIS.

Impact on Aesthetic Resources - The Proposed Action would result in a change to the visual landscape. Not enough information is currently available to determine the long-term and short-term impacts. A supplemental visual impact evaluation will be performed to determine if the Proposed Action creates significant visual impacts.

Impact on Transportation - The Proposed Action may result in increased traffic associated with the use of one (1) or more off-site locations for soil borrow. Additionally, impacts associated with the closure of portions of Brew Road and O'Brien Road will be evaluated. Further information needs to be gathered to determine the magnitude of these impacts.

Impact on Public Health - The Proposed Action will result in excavation within two thousand (2,000) feet of the existing solid waste landfill.

The above impacts will be analyzed and addressed in the DSEIS.
