225 people in the Finger Lakes Region are hospitalized, 44 of them are in ICU

Released from Isolation

There have been 9015 Released from Isolation – Confirmed cases to date.

There have been 9336 total Released from Isolation to date. This number reflects confirmed positive COVID-19 cases and known presumed positive COVID-19 cases.

Changes to the Monroe County COVID-19 Dashboard:

1) COVID Tests and % of COVID Tests that were positive (7 day average)

At the start of the pandemic, the Monroe County Department of Public Health used a system called CDESS to track individuals tested for COVID-19 to determine the **percentage of County residents tested**. The CDESS system only counts individuals, not the number of tests they have undergone.

As the pandemic has continued, it has become common for many people to undergo multiple tests, especially individuals who work in a health care setting. CDESS does not count these additional tests, so it does not accurately reflect the **percentage of tests that are positive** in Monroe County.

Since New York State uses the percentage of tests that are positive to determine Monroe County's positivity rate, we are changing our dashboard to reflect that percentage. Using a system called ECLRS, we are now counting tests taken rather than using CDESS to count individuals.

This eliminates the ongoing discrepancy between the New York State and Monroe County dashboards and provide information that is more useful during this stage of the pandemic.

2) People Released from Isolation

At the start of the pandemic, the Monroe County Department of Public Health used the term “recovered” to describe people who have completed their isolation period and are no longer considered infectious.

Commissioner of Public Health

As the pandemic has continued, it has become evident that many people have mild to severe symptoms that continue beyond their isolation period. Therefore, we feel that “released” is a more appropriate term than “recovered” to describe these individuals.

3) 7-Day Average of New COVID-19 Positive Cases

We are adding this to the dashboard since it is a key metric as we track the prevalence of the disease in our community.

4) Maps

Our maps showing **Cases by Zip Code** and **Zip Code Case Rate per 100K** have been cumulative, showing the cases recorded since March. We are now going to report the **Cases** and **Case Rate by Zip Code for the Last 4 Weeks** instead, to better reflect the current state of the pandemic and its impact on our neighborhoods.
