

BLEACH AS A SANITIZER

Recommended amounts of “bleach” to reach 50 ppm (parts per million) necessary for utensil sanitizing

<u>Gallon(s) of Water</u>	+	<u>Ounces of Bleach</u>
1.....		1 Teaspoon
3.....		Approx. ½ oz. (1 Tablespoon)
5.....		Approx. ¾ oz.
10.....		Approx. 1½ oz.
20.....		Approx. 3 oz.

*A sanitizing solution of water and household bleach **must be changed** on a regular basis (depending on use) to provide adequate sanitation.*

*It is recommended that a warm 75°F water temperature be maintained in the sanitizing compartment of the 3 bay sink and that utensils be immersed for **at least one minute** in that compartment.*

Sanitizer required for storing wiping cloths

and wiping surfaces that can not be immersed in the sink should reach 100 ppm or double that of utensil sanitizer.

1 Gallon of water + 2 Teaspoons of bleach

3 Gallons of water + 1oz. (2 Tablespoons) of bleach
