Part 3 Determination of Significance

For every question in Part 2 that was answered "moderate to large impact may occur", or if there is a need to explain why a particular element of the proposed action may or will not result in a significant adverse environmental impact, please complete Part 3. Part 3 should, in sufficient detail, identify the impact, including any measures or design elements that have been included by the project sponsor to avoid or reduce impacts. Part 3 should also explain how the lead agency determined that the impact may or will not be significant. Each potential impact should be assessed considering its setting, probability of occurring, duration, irreversibility, geographic scope and magnitude. Also consider the potential for short-term, long-term and cumulative impacts.

The proposed action is for the acquisition of interests in properties and improvements to an existing roadway. Improvements consist of remedying asphalt condition, improving roadside drainage, cross slopes, and increasing width and condition of paved shoulders, all of which are consistent with Type II roadway maintenance (617.5(c)(5)) and has been found categorically to not have significant adverse impacts on the environment. Accordingly, roadway maintenance will not result in a significant adverse environmental impact.

The acquisition of interests in properties is limited to permanent and temporary easements related to roadway maintenance and improvements that by themselves are classified as a Type II action. The acquisition of temporary and permanent property interests are ancillary to necessary roadwork and are minor, but are an unlisted action. However, such property acquisitions are minor and ancillary to roadwork will not result in a significant adverse environmental impact.

Considering both actions together, the main environmental concerns are impacts to wetlands. The scope of work does include shoulder improvements which may widen the impermeable surface. However, shoulder improvements are minimal, will be constrained by environmental and physical features and will include drainage channels that will allow runoff to infiltrate and filter into the ground or into storm sewers before reaching adjacent wetlands. Additionally, should a wetland delineation determine encroachment on existing wetlands Monroe County will seek appropriate permits with required mitigation efforts from the New York State Department of Environmental Conservation consistent with the Freshwater Wetlands Act.

☐ Check this box if you have determined, based on the information and analysis above, and any supporting documentation, that the proposed action may result in one or more potentially large or significant adverse impacts and an environmental impact statement is required.

✓ Check this box if you have determined, based on the information and analysis above, and any supporting documentation, that the proposed action will not result in any significant adverse environmental impacts.
